IDNV PlugIn Mapping System

The IDNV's Mapping System is a unique tool for retailers who want to check the reliability of their own item database as well as to improve it and to continually keep it up-to-date by means of the IDNV.

Hand on heart: over the years it is virtually unavoidable that your internal database develops a life of its own. Therefore its maintainance becomes complicated, because the article data records have been created and edited over a longer period and can originate from various sources. Once data records are in the ERP or a web shop and serving as the basis for transactions and movement of goods, deleting or changing them is no longer possible without further modification - for the goods and transactions are linked with the data record. Moreover, it requires a large amount of time and energy to maintain correct and up-to-date data. Yet, who has the time and the money to invest for this purpose? Regardless, this won't be necessary, because:

This is exactly what the IDNV Mapping System as a powerful and intelligent tool is available for. The Mapping System allows you to link your own article data base with the IDNV's high-quality and up-to-date reference article data records. Once this has been done, the Mapping System carries out automated examinations regarding the correctness of important information such as prices, etc. Moreover, a continuous data supply with IDNV data records can be set up in a way that links the retailer's own database keys with the IDNV data records. Thus, there are no obstacles for an ongoing import of current IDNV reference data records and reference prices into the retailer's internal system! There is nothing more up-to-date and more precise.

The Mapping Systems sophisticated check routines and algorithms ensure in advance that the matching of the databases is processed as automatically as possible. A task that would be almost impossible to master manually or in item lists, can be done with the Mapping System within a few hours perfectly and with the most transparency! There is no way to solve this complex task more efficiently.
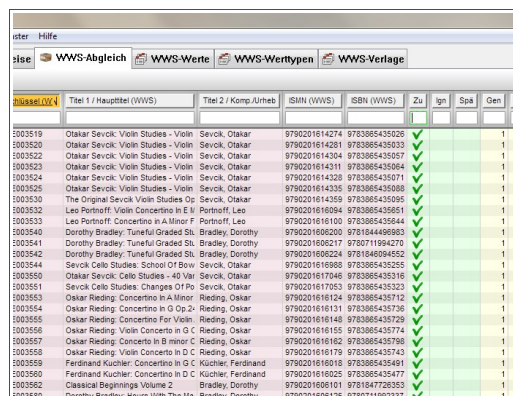

Some Highlights

- *Automatic matching proposals on item level*

- *Pre-matching on publishers' catalogue level. Presetting of algorithms for the adaptation of similar numbers, so comparison and matching can take place automatically*

- *Highly transparent searches and reports of possible errors in the very same data records or respectively in comparison to the IDNV reference (e.g. differences in prices, barcode numbers, etc.)*

- *You compare your own data records with the IDNV reference database - therefore, you obtain the best and most original possibility to compare and to detect deviations!*

- *You save time and nevertheless obtain the highest transparency and safety of your data!*

How the IDNV Mapping System works

First you export the artcle data from your own system. Then you fill your personal IDNV Mapping System with the exported database (An interface for this purpose is available upon request). The Mapping System then starts to compare the imported data with the IDNV's data. The matches found via various criteria such as ISMN, other barcode numbers or order numbers, are proposed for mapping. After an editorial visual inspection, the mapping can be completed and with a good amount of the data records, this can be executed directly en masse. "Similar" order numbers can be adjusted through dynamic transformation, and thus be mapped as well.

After you have processed the mapping, the IDNV Mapping System immediately conducts tests. Errors detected in the tests are displayed in the appropriate prompts. You keep track of everything, can flexibly filter and search the data. And thus, you can investigate and improve your data in all details. The Mapping System is thoughtfully designed in all respects and brings a unique transparency into the complete process despite its complexity and the scope of data!

Specifications

- The IDNV PlugIn Matching System can be combined with IDNV-Order (retailer, wholesalers) as well as with IDNV-Master (publishers).

- The Matching System is available in various configurations depending on the requirements of the particular users. The central condition is an IDNV participation. In addition to participation, the best suited Mapping System can be booked for a monthly fee and with a minimum usage of one year. A retailer version is available starting from 24,00 Euros per month. The fee for the comprehensive version applicable for wholesalers and distributors is 82,30 Euros per month. The publisher versions are avaiable in similar ranges depending on the particular configuration. Please contact us for more information.

More compatible options

- Service Data Mapping: editorial service, preparing the mapping process for you.

- Configuration of an import interface precisely fitting to your own ERP's / inventory control system's data. Therefore, simplified updating of your own databases in the Matching System.

- Continuous data supply: up-to-date information from the IDNV for the import into your system in varying formats.
